

Sales Analysis Dashboard Report – Sample Superstore

Project Overview

The objective of this project was to analyze sales performance using the Sample Superstore dataset and create an interactive dashboard in Microsoft Excel. The dashboard provides insights into sales trends, profitability, customer segments, regional performance, and product-level performance to support business decision-making.

Data Preparation and Cleaning

Before analysis, the dataset was cleaned and validated to ensure accuracy and consistency.

Data Cleaning Activities

- Checked for duplicate records and found no duplicates.
 - Verified missing values across important fields.
 - Standardized Order Date and Ship Date formats.
 - Converted date columns into proper Excel date format.
 - Verified numerical fields such as Sales, Profit, Quantity, and Discount.
 - Ensured data consistency across categories, regions, and segments.
-

Dashboard KPIs

The dashboard includes four key performance indicators (KPIs):

Total Sales

₹ 2.30 Million

Represents the total revenue generated from all orders.

Total Profit

₹ 0.29 Million

Represents the total profit earned after all sales transactions.

Total Orders

9,994

Represents the total number of transactions recorded in the dataset.

Profit Margin

12.6%

Measures profitability and indicates how much profit is generated for every ₹100 of sales.

Dashboard Analysis

1. Sales Trend (2014–2017)

The sales trend chart shows consistent growth over the four-year period.

Key Findings:

- Sales increased from ₹4.84 Lakhs in 2014 to ₹7.33 Lakhs in 2017.
- A slight decline was observed in 2015.
- Strong growth occurred during 2016 and 2017.

Conclusion: The business demonstrated positive sales growth over time.

2. Regional Sales Contribution

The regional analysis identifies which regions contribute most to overall sales.

Key Findings:

- West Region contributed 31.58% of total sales.
- East Region contributed 29.55%.
- Central Region contributed 21.82%.
- South Region contributed 17.05%.

Conclusion: The West region is the strongest market and contributes the largest share of revenue.

3. Sales by Category

The dashboard compares sales across major product categories.

Key Findings:

- Technology generated the highest sales.
- Furniture generated the second-highest sales.
- Office Supplies generated slightly lower sales than Furniture.

Conclusion: Technology is the most important revenue-generating category.

4. Sales by Sub-Category

Sub-category analysis helps identify top-performing products.

Key Findings:

- Phones generated the highest sales.
- Chairs ranked second.
- Storage and Tables also contributed significantly.
- Fasteners, Labels, and Envelopes generated the lowest sales.

Conclusion: Phones and Chairs are the primary sales drivers for the business.

5. Sales vs Profit by Category

This analysis compares revenue generation against profitability.

Key Findings:

- Technology generated both the highest sales and highest profit.
- Office Supplies produced healthy profits relative to sales.
- Furniture generated substantial sales but comparatively lower profit.

Conclusion: Technology is the most profitable category, while Furniture may require margin improvement strategies.

6. Sales Distribution by Segment

Customer segments were analyzed to understand purchasing behavior.

Key Findings:

- Consumer segment contributed 50.56% of sales.
- Corporate segment contributed 30.74%.
- Home Office segment contributed 18.70%.

Conclusion: The Consumer segment is the primary customer base and contributes more than half of total revenue.

Interactive Features

The dashboard includes dynamic slicers that allow users to filter data by:

- Region
- Segment
- Category

These filters enable users to perform detailed analysis and explore different business perspectives interactively.

Key Business Insights

1. Sales increased significantly between 2014 and 2017.
 2. Technology is the highest-performing category in terms of both sales and profit.
 3. The West region contributes the largest share of revenue.
 4. The Consumer segment is the dominant customer group.
 5. Phones and Chairs are the strongest-performing sub-categories.
 6. Furniture generates high sales but lower profitability compared to Technology.
-

Tools Used

- Microsoft Excel
 - Pivot Tables
 - Pivot Charts
 - Slicers
 - KPI Cards
 - Data Cleaning Techniques
 - Dashboard Design and Visualization
-

Conclusion

The Sales Analysis Dashboard successfully provides a comprehensive view of business performance. Through KPI monitoring, trend analysis, regional comparison, category evaluation, and customer segmentation, the dashboard enables data-driven decision-making and helps identify opportunities for growth, profitability improvement, and strategic planning.
